

Visual Studio Code, Python Installation Guide

- Create a project folder in your computer which will be your working directory where all your programming files will be saved.
- Download and install Visual Studio code and add the Python and Jupyter Notebook extensions.
- In VS code, create a workspace by selecting the project folder created in step 1.
- Once your workspace has been made, open python terminal and type into it: `python -m venv venv`
- Once this new virtual environment has been created in your project folder, select this for your workspace
