

Gurobi Installation

- To install and use Gurobi, a license is necessary. As student, such license can be claimed for free [here](#)(it is necessary to create an account, selecting the "Academic" option). Afterwards, you can download and install the fitting version (i.e., 32- or 64-bit) of Gurobi for your system.
- To activate Gurobi, login to your user account on gurobi.com and open your current licenses [here](#). Open it, by clicking the license ID. On the bottom of page, you will find instruction on how to activate your license using the given command in a terminal. Before executing the command, make sure you are connected to the university network via Eduroam.
- Finally to install Gurobi into your virtual environment and workspace on vscode, type the following into the python terminal (make sure you are still in the correct project folder path):
`python -m pip install gurobipy`
